Chemicals, leaking gas, faulty boilers or falling aircraft could all be the cause of life-endangering EXPLOSIONS. If an explosion occurs:

1. Remain calm.

2. Be prepared for secondary explosions.

3. Crawl under a table or desk.

4. Stay away from windows, mirrors, overhead fixtures, filing cabinets, bookcases, and electrical equipment.

5. Be guided by Law Enforcement and/or Fire Department personnel. If evacuation is ordered, proceed to one of the designated exits.

6. Do not move seriously injured persons unless they are in obvious immediate danger (fire, building collapse, etc.)

7. Open doors carefully. Watch for falling objects.

8. Do not use elevators. Follow evacuation procedures if possible and safe to do so.

9. If requested, accompany and assist persons with disabilities that appear to need direction or assistance.

10. Do not use matches or lighters.

11. Avoid using telephones.

12. Do not spread rumors or speculations on cause(s).

13. Planning includes being familiar with possible hazards in your building and knowing nearest exit locations and evacuation assembly points.
